

Cyber Security

Cyber attacks are now very real in New Zealand. Being “that little country at the bottom of the world in the middle of the ocean” is no longer isolating us from these attacks.

Educating your staff on cyber awareness

Unfortunately, employees have long been viewed as the ‘weakest link’ in a business’s cyber security chain, and human error is still the number one cause of data breaches so are the primary target to “open” the door to your systems.

Humans are Targets

36% of data breaches involve phishing

Humans make Mistakes

90% of data breaches involve human error

Cybercriminals are using more advanced techniques to exploit humans. The traditional annual security awareness training video or company memo just isn't enough to protect your business from loss of sensitive information, reputational damage and financial repercussions.

The solution is a user-focused security training program that educates users on the art of identifying dubious activities or contacts, protecting your business and your staff also in their personal life from being compromised and exposing sensitive data or identity theft, sometimes leading to a catastrophic cyber security event.

Expect to start seeing in your cyber insurance policy, *Do you have an active user cyber awareness training program (Y/N)*

Key features of the program are:

Security Awareness Training

Assess each user's security knowledge gaps and automate regular training courses that tackle their unique risk areas and track these results for you to understand your staff learning levels.

Simulated Phishing

Automate periodic phishing simulations that assess your employees' ongoing risk to a range of attack techniques. Instantly train users dependent on their level of risk.

This program is to transform your employees into your first line of defence.

Protect your staff, your business, and your reputation from becoming another cyber statistic.

Contact your Resolve Account Manager to discuss starting this program in your business now.
